Description:

3000 Mile Wide Disc Caught By ISS? Ok, this image was released by the Brasilia Planetarium recently and seems to show a massive disc shaped object stationed above the Earth. The disc is estimated to be around 3-5 thousand miles in diameter. If you look at the bottom left of the image you can see a cloud formation passing over the top of the anomaly, this indicates that the object is not a projection onto the earth. I have no idea what this object is, i can only speculate at this point. I have contacted the Planetarium for further clarification regarding the slide,

That is a photo taken inside a planetarium.

The mashine at the bottom is the projector that is projecting images on the wall. In this image the planetarium shows how an impact of an asteroid would look like.

pestleman1951

Total lie !!! Not an image from the ISS !!! Actually a pic from a planetarium show on an imagined asteroid impact on Earth and StephenHannardADGUK KNOWS THIS !!!
