In June 1965, Major James McDivitt saw, filmed, and photographed an object, which approached the Gemini IV (3rd June -- 7th June 1965) capsule in which they were orbiting the Earth, passing over Hawaii. He stated: "It had a very definite shape - a cylindrical object - it was white - it had a long arm that stuck out on the side." Image Link - (Download before it disappears.) Good one! Interested to see what a photo expert would say. Problem with film?

The second stage never made it into orbit. They always recovered these things.

The scans were done directly from rolls of negatives on a roll of film. I agree with you that this looks a little like someone has tried to burn the centre of the anomaly. You can still see the outline of the object though.
