## Part 1

October/ 27/2008

I believe that the single most important obstacle to UFO/ET disclosure are global entrenched business interests working in concert with global intelligence and military interests. **Dwight D. Eisenhower** called this kind of cooperation and collusion between global and national military and business interests *the Military Industrial Complex (MIC)*.

[He warned in the 1950's](#) that the MIC was a grave threat to constitutional government and democracy.

Control over the UFO/ET cover-up and the exploitation of extraterrestrial technologies began in the hands of government and military officials through a working group called [MJ 12](#), but according to whistle-blowers global entrenched business interests engineered a purge during the Nixon administration that resulting in the privatization of both the cover-up and the exploitation of extraterrestrial technologies and knowledge.

A major selling point seems to have been that a quasi-private global corporation could better keep the UFO/ET awareness secret while at the same time exploiting extraterrestrial technologies for the benefit of American and European government security and economic interests. The problem seems to be that it has been impossible for factionalized governments to adequately oversee such a vast global unified autocratic enterprise resulting in this nameless Corporation X turning the tables on government control and oversight.

I would be the first to say that I could be wrong about the nature, size and influence of *Corporation X* and that I could be misinterpreting statements by [Ben Rich](#) and others that seem to indicate to me that we are dealing with standard corporate structure. For instance, when Ben Rich say's that since the Nixon purge in the 1960's UFO/ET matters are now under the control of private enterprise and a international board of directors I think of *corporate structure*.

I would be the first to admit that I only have a very vague understanding of something that is indeed very complex. Still we have to start someplace. Maybe we have something here like [the British East India Company](#).

This company had a charter from the British Crown that gave it a global monopoly and it fought its own wars with its own armies and even controlled territory around the globe in its heyday. The *East India Company* also had a powerful national lobby and great control over the British political process. It has also been suggested to me by one individual that *Corporation X* could be a conglomerate of colluding corporations operating like the *Health Industry*.

Still another individual brought up the concept of overall control through a social network integrated in part by a [Interlocking Directorate](#).

I think what we have is a multi-trillion dollar corporation that has become so powerful that it has become a law into itself and can dictate to not only the American and European governments that created it, but to most other governments around the globe and the UN as well.

*Corporation X's* real name could be something like *Alien Resource Research & Development Corporation (ARRDC)* or perhaps more simply *Alien Resource Development Corporation (ARDC)*. A more generic title could be, *Space Resource Research & Development Corporation (SRRDC)*

I would suspect that this *Corporation X* is structured similar to quasi-private *Fannie Mae* and *Freddy Mac* but much larger and extremely secretive.

Of course *Corporation X* would dwarf *Fannie Mae* and *Freddy Mac* by perhaps 10s of trillions of dollars and its limited oversight would be by more than one government as well. One also has to wonder if this *Corporation X* could be vulnerable to severe economic crisis like *Freddy Mac* and *Fannie Mae* and so be subject to a covert meltdown. I certainly hope so.

Because of the huge sums of money that *Corporation X* makes and has at its disposal it seems to have been able to buy control over classified elements of global government militaries and intelligence agencies, private corporations, and criminal organizations making these organizations subsidiaries to the Corporation.

In the United States the Air Force and Army collect the ET hardware with the CIA as the middle man responsible for maintaining security and flow of the hardware to private defense and industrial corporations.

We can see references to this sort of activity in [Corso's Book, \*The Day After Roswell\*](#). Corso spent a lot of time and effort attempting to evade the **CIA** in the Army's limited effort to distribute small amounts of Roswell debris to industrial and defense corporations. It is obvious from Corso's book that it was the CIA rather than the military who were in primary control over this activity.

I believe that control over this hugely profitable collection-exploitation process is accomplished through the buying of military and intelligence community cooperation and the Corporation acting as the sole general contractor distributing ET technology and contracts to cooperating private defense and industrial corporations. If you don't cooperate you don't get fed.

Much documentation as to the early stages of the UFO/ET cover-up has been leaked or declassified which has been of apparent benefit to UFO investigators. I say apparent because the evidence suggests to me that the release of these early documents seems to have served a more deceptive secret agenda meant to divert attention away from the current organizational structure of the cover-up and exploitation of ET technologies.

This is a very important point that seems to have been overlooked by UFO/ET investigators both in the public domain and in the military. We in public, government and the military cannot target and remove obstacles to UFO/ET disclosure if we can't understand the nature of the adversary attacking us or the strategies employed against us by the adversary.

Naturally, the reader will ask, where is the evidence to support this speculation?

I think the most important pieces of evidence comes from the testimony of Dr. **Ben Rich** the past head to *Lockheed's Skunk Works*.

Ben stated before his death,

"1. There are 2 types of UFOs - the ones we build and ones 'they' build. We learned from both crash retrievals and actual "hand-me-downs." The Government knew and until 1969 took an active hand in the administration of that information. After a 1969 Nixon "purge", administration was handled by an international board of directors in the private sector."

7. It was Ben Rich's opinion that the public should not be told. He believed they could not handle the truth - ever. Only in the last months of his decline did he begin to feel that the "international corporate board of directors" dealing with the "Subject" could represent a bigger problem to citizens' personal freedoms under the United States Constitution than the presence of [off-world visitors](#) themselves. "

<http://web.archive.org/web/20030604075353/http://alienufoart.com/RoswellUFO.htm>

Further collaborating evidence comes from Whistle-blower **Bill Uhouse**. In this early report Bill was called *Jrod* but later *the ET he worked with was called the Jrod*.

[Bill Uhouse states,](#)

"Understanding how this social structure works is like trying to understand the internal relationships of a tight-knit family in some Asian culture."

"If any area seems dubious, he asks his boss about it, who says either "Okay" or "Let's hold off on that a while." For example, his boss said it was okay to mention Nixon as the founder of the satellite government, because "Nixon is dead." Playing by the rules is very simple for Jarod. He is not working from any rule book or security classification system."

"Jarod says the satellite government lives by its own laws, completely separate from the conventional government except for an interface with the military. It is not controlled by any other agency, so it does not have to obey the security regulations of other agencies. The fact that Jarod is allowed to speak does seem to imply permission from a higher level than the supervisor, but perhaps a word from management, without any paperwork, is all it takes to make something secret or not secret. Security could be both more intrusive than in any conventional defense program and more informal to those who are used to the structure. Consider the special circumstances...."

"This agency was separated from the rest of the government over 40 years ago. Thus, it would have had an opportunity to evolve in its own way, adapting to the unique requirements of the subject matter."

"The organization is largely composed of older men who have worked with each other for decades. A worker's supervisor and his security officer are assigned to him for life."

"The organization is extremely hierarchical, especially given the needs of compartmentalization. A worker reports only to his immediate supervisor, and direct contacts with members of other departments and higher management are rare."

Additional collaborating evidence that got me on the trail of *Corporation X* came when a personal contact told me that he had contacted *Warner Robins Air Force Base* and showed a piece of a alleged crashed extraterrestrial craft to very interested representatives of the military and civilian defense contractors on base.

They were obviously working closely together. This got me to thinking about how this working together between private enterprise and government could be organized at it relates to ET technology. I also have other civilian and military sources that have explained to me how the military has been relegated to operating as gopher to the MIC and *Corporation X*.

There is now evidence that [military leaders and diplomats are now waking up](#) to the fact that they are being manipulated by entrenched business interests to the detriment of overall society and relations with various extraterrestrial races.

In fact as the military *UFO/ET Working Group* has attempted to push disclosure they have come under attack by unknown parties and are presently attempting to discover the source of such attacks.

It is my supposition that the tracing of these attacks both in the public and governmental domains will eventually lead to *Corporation X*.

We need to know the name of *Corporation X*.

- Where is the Corporation headquartered?
- Who are the shareholders?
- How many and who is on the board of directors?
- Who are the Chairman, President, Vice Presidents?
- How does *Corporation X* maintain security and plug leaks?
- How does it employ private contractor mercenary armies to be used as death squads, black bag operators for the intimidation of public, military and private officials that are pro-disclosure?
- Is there a mechanism for oversight by governments and how effective is his oversight?

Those of us in the civilian community and in the military that desire UFO/ET disclosure should make it a very high priority to work together to further identify, lock on and target anti-disclosure *Corporation X*.

I believe *Corporation X* is out of control and its activities not only threaten public and democratic constitutional control but the whole of humanity and the global environment. I would appreciate it if other researchers forward on to me any evidence they might have in reference to *Corporation X* for use in a second follow up article.

This is a work in progress.

## Part 2

November/01/2008

I received feedback from my friends and associates in the UFO/ET field after the first article on Targeting *Corporation X* was published. As I stated the first article was a work in progress. In this second article my thinking has jelled and I may have found a simple elegant way that *Corporation X* if it exists could be organized.

At the very least I have a viable hypothesis that other researchers and investigators may be able to verify or disprove over time.

Sometimes evidence exists right in front of us but without some kind of insight we are unable to process the evidence or know where to go for verification.

A lawyer friend and associate suggested a mental exercise to assist insight into the nature of *Corporation X*. He suggested I start at the UFO crash site and follow the debris trail from crash retrieval team to military base to corporate research and development centers. There would seem to be two exploitable resource trails.

One would be from crash collections and the other from cooperating secret trade agreements with at least one alien race. In the latter case the evidence suggests that technology and alien assistance is traded for biological access and exploitation of human genetic material and fetuses as part of an alien research project of hybridization and infiltration into earth human society.

Could this be a modern alien version of the old slave trade?

When I followed both these trails they ended at private corporate research and development centers. The debris trail then turned into a paper trail that when followed traces to [special access programs](#), (SAP's) and then to an overall corporate subcontract with *Corporation X* at each subcontracting corporation. At this point I had a Eureka moment.

It would seem that the most efficient and simple organizational structure for *Corporation X* is as I had suggested in my previous article is one of general contractor to all other private and public corporations as well as to agencies of government.

*Corporation X* must have a charter, monopoly and a multi-government oversight board controlled by several key western governments including the United States. This would be similar to the charter the British gave to the British West India Company but in this case *Corporation X* does not manage an empire directly but rather secretly and indirectly by contracting out the work to large and small subcontracting independent corporations.

In this case a relatively small, tight knit, secretive general contractor, *Corporation X*, could control a huge massive and complicated enterprise with a small headquarters and staff made up of accountants, lawyers and inspectors. The Corporation's job would be to manage the subcontractor contracts to insure that the Corporation gets its proper percentage of the profit, that the subcontractor attends to security, and that the subcontracting corporation is efficient.

A subcontracting corporation could have multiple *special access programs* (SAP's), all under one prime

subcontract with *Corporation X*.

Under this scheme the subcontracting corporations are placed in a subservient role and forced to compete with each other for contracts. This would not be all that different that a criminal enterprise in which the enterprise allows the business owner to remain in independent control of the business but must pay a fee and allow access to its books by the criminal enterprise in order to stay in business.

This kind of contracting arraignment would also have some characteristics of a cartel in that *Corporation X* has a monopoly on the alien resource and can fix the price and manage the resource as does an oil cartel.

*Corporation X* can contract out the R&D (*Research and Development*), security, its own government lobby, the management of the resource etc. so as to focus exclusively on the management and enforcement of contracts. It might also assist in providing capital through its banking networks to finance the private contractor's SAP contracts as well.

In this manner a small international board of directors could control a huge multi-trillion dollar enterprise for the benefit of the share holders of the corporation. It could be that the shareholders are the large United States and European banks that are in turn controlled by wealthy powerful families in Europe and the United States.

Such massive organization structure with a relatively small controlling corporation would be a very efficient and secure way to exploit alien technologies. The tradeoff would be that it would be very difficult for governments to oversee and control such a powerful enterprise operating in extreme secrecy and the danger is that the organization could turn the tables on oversight by governments and so function in such a way that would not be in the public interest.

The consequences related to privatization of the exploitation of alien resources could be extremely serious for the rest of society. For instance the emphasis on profit might create a policy imbalance so as to submerge other policy making elements of government involved in *ET diplomacy*. These other elements like the *military UFO Working Group* don't seem to have a powerful lobby behind them to push their interests.

This emphasis on corporate profit and pressure for an indiscriminate military shoot-down policy could greatly endanger the public interest by discouraging potential ethical ET allies and encouraging societal interactions with less ethical extraterrestrial races. In fact if there was a slowdown in the technology flowing through the ET technology pipeline this could throw *Corporation X* and its subcontracting corporations into crisis with so many corporate mouths now to be fed.

Another serious consequence of this kind of corporate organizational structure was suggested to me by a friend who used to work in corporate America.

She suggested that such a corporation would be interested in managing the resource for maximum profit potential. This could be a large contributing factor as to the progress or lack thereof in which the global economy could be switched away from fossil fuels into clean alien energy technology. I would expect there is a heated tug of war between global corporate special interest groups in this regard that would involve the Corporation.

There could even be fallout related to overall disclosure in this regard.

Another consequence of this kind of corporate organizational structure detrimental to the public interest would be extreme compartmentalization that would be good for security but very bad for policy makers attempting to oversee this endeavor. Along with the deliberate compartmentalization and secrecy involved with the SAP's would be the addition level of secrecy associated with the nature of the corporate structure itself?

Most corporations by nature are extremely secretive knowing knowledge is power.

I am told this is especially true for R&D corporations.

Even another unintended consequence of privatization and lack of oversight would be a Wild West kind of law and order rife with criminal activity. Some criminal activity would even be necessary, for instance the falsification of patents and severe illegal security procedures.

If anybody gets caught in illegal or unconstitutional activity then the subcontracting corporation will receive the blame not *Corporation X*.

My lawyer friend and associate suggested that *Corporation X* might have a name and a public headquarters because that could be necessary for doing business. I would expect that because of its small size it could keep a low profile and be hidden in plain sight unless one is well informed enough to know where to look and interact with it. Now that we have an idea of *what to look* for perhaps we too will be able to discover *Corporation X*'s name and headquarters.

One friend suggested New York City as a possible home for *Corporation X*.

This might make sense because even though European allies seem to be involved, the United States seems to have the most influence over the process of exploitation of alien technologies through the large number of powerful global corporations headquartered in the United States.

So it is possible that *Corporation X* is headquartered in the United States for reasons of convenience.
