

Mystical Dragon's Triangle | The Sea Of The Devil

THE BERMUDA TRIANGLE'S infamous association with disappearing boats and aircraft is known across the globe.

Like the [Bermuda Triangle](#), the Devil's Triangle area may be volatile, subject to sudden weather changes and ocean swells not yet understood. Undersea volcanoes are believed to influence the area's sudden environmental changes. Others cite *mikakunin hiko-buttai*, Japanese for UFOs.

Less well known is an area off the west coast of Japan which has an equally deadly history. It is an area where Japanese sailors fear to voyage; they call it 'Ma-no Uni' - the 'Sea of the Devil'. Legend has it that huge restless dragons surface from their deep shelters to seize any unfortunate passing mariners.

Japanese sailors have often recorded freakish occurrences in the area and talk of hearing terrible noises and seeing awful red lights. They believe one particularly potent creature lives in an immense palace beneath the waves. They call this monster 'Li-Lung', the 'Dragon King of the Western Sea', and say his lair is decorated with the ships he has captured.

This mysterious zone stretches from western Japan to Yap island in the south and Taiwan to the west. Like the Bermuda Triangle, it is seen as having an aboveaverage number of navigation and communication failures. In truth, this area of ocean bears a remarkable resemblance to its Western cousin. Both areas are known for extreme changes in weather conditions, unexpected fogs, tidal waves, seaquakes and hurricanes, and both have examples of agonic lines, lines upon which a compass needle will point true north and south. Their most unwelcome similarities are the truly horrifying levels of unexplained sinkings and disappearances.

By the late 1940s, the amount of ships being lost without trace in the region lead to the Japanese government declaring the area a danger zone.

In the early 1950s they decided to dispatch a research vessel to study the area. Despite

enjoying good visibility and calm seas, the Kiao Maru No.5 disappeared without trace on 24th September 1952. The lives of all twenty-two crew and nine scientists were lost. The vessel has never been found. It has only been reported in the West. To the Japanese, they are regular occurrences which stretch back for centuries and continue to this day.

Whether it is dragons or not, the real evidence behind this ocean's terrible secret remains on the seabed.

Backup and Restore Windows 8 Activation

0

Labels: Windows 8
Links to this post

The information contained in this article is for general guidance regarding backup and restoration of activation in Windows 8.

This guide will describe how to backup and restore your activation in a few easy steps in case of a worst case scenario and you have to reinstall Windows.

Warning: *The solution will likely 100% fail if you make changes to hardware and re-install Windows and then trying to restore activation again, but this have been the case since the Vista days.*

If you buy the retail version of Windows 8, backing up the activation would be a more permanent solution given that you don't change the hardware or OS edition along the road which means you have to reactivate and backup again.

And also you can't activate different edition of Windows thinking you can use the original backup for another edition later.

The activation is tied to your specific hardware and OS edition, so keep this in mind. I would also like to clarify that now if we're activated with the KMS solution the activation is valid for 180 days, nothing more nothing less. There is no magic behind this backup solution that could expand the period further then the 180 days without re-activate via an KMS server eventually.

How to Backup and Restore Windows 8 Activation

1. Go to C:\Windows\System32\spp\ and backup the **store** folder as this turned out to be the only folder you need to make backup of (verified by myself)

Note1: The store folder might be hidden, open up Folder options from Control panel and choose View tab, select Show hidden files and folders + uncheck Hide protected system files

Note2: Make sure to verify that the store folder contains these files and folders!

- 1 file named data.dat which is hidden
- 1 file named tokens.dat which is visible
- 1 folder named cache containing a file named cache.dat

2. Re-install Windows

3. After Windows is re-installed I suggest running a new Command Prompt as Administrator where you need to type in **slmgr -upk** to uninstall the key so the status changes to Unlicensed

4. After step 3 you need to reboot in Safe mode and easiest way is by using msconfig via

Run. Choose the Boot tab and then Safe boot-Minimal, apply and restart when prompted

5. After the PC has rebooted in Safe mode open a Command Prompt as Administrator and type **net stop sppsvc** to stop the Software Protection Platform service (sometimes you can get a message that it's already stopped and not running)

6. Go to C:\Windows\System32\spp\ and replace the current store folder with the backed up one (replace the files altogether)

7. Go to Run and use msconfig and choose Normal boot under General tab this time, apply and click restart when prompted

8. When restarted you can see that the watermark is gone and by checking the usual slmgr -dli/dlv/xpr commands in Command Prompt you'll see that it worked and you're activated

9. Download Windows 7 SP1 Home Premium Ultimate ISO From Microsoft
Status: License renewed and Genuine Status: Genuine

10. How to Make Bootable Windows USB Without Formatting
This solution should be possible to do with any edition of Windows 8. And how that this is Win Toolkit: Customize And Create Unattended Windows 8/8.1 Installation
Download Office 2013 From Microsoft Using the Direct Key

11. Win Setup From USB, Free Tool To Prepare Bootable And Multiboot USB Drives
As for now enjoy all the testing and use of Windows 8 with confidence!

Note:

Installing certain hardware drivers will break the activation on Windows 8 forcing you to reactivate. One way to prevent this from happening would be to make sure everything is installed and up to date before activating and then take the backup. That way when you have reinstalled Windows and the hardware drivers it should work just fine restoring activation later.

Thank you for taking the time to read all the way down here, it will save much time for both parties!

Devil's Sea

The **Devil's Sea** (魔の海 *Ma no Umi* Help:Installing Japanese character sets), also known as the **Dragon's Triangle**, the **Formosa (Taiwan) Triangle** (traditional Chinese: 福爾摩沙三角; simplified Chinese: 福尔摩沙三角; pinyin: *Fúěrmóshā Sānjiǎo*) and the "**Pacific Bermuda Triangle**", is a region of the Pacific around Miyake Island, about 100 km south of Tokyo. The Devil's sea is one of 12 Vile Vortices, originally plotted by Ivan T. Sanderson.^[1] The size and area varies with the report (the only reports stem from the 1950s), with various reports placing it 110 kilometres (68 mi) from an unspecified part of Japan's east coast, 480 kilometres (300 mi) from the coast, and even near Iwo Jima, 1,200 kilometres (750 mi) from the coast.(Kusche:259-260)

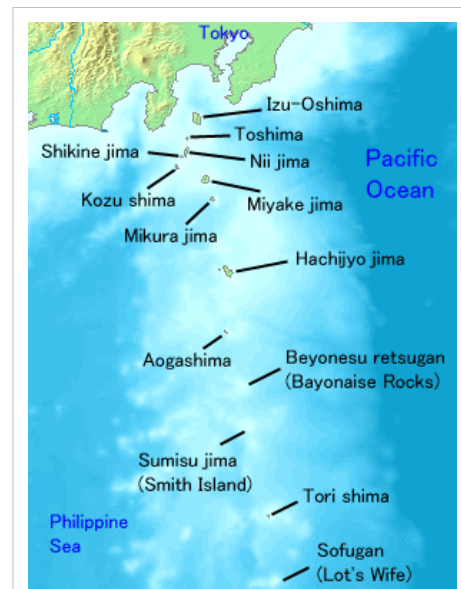

This area is said to be a danger zone on Japanese maps, according to Charles Berlitz's books *The Bermuda Triangle* (1974) and *The Dragon's Triangle* (1989). He states that in the peacetime years between 1952-54 Japan lost 5 military vessels with crews lost totalling over 700 people and that the Japanese government sent a research vessel with over 100 scientists on board to study the Devil's Sea, and that this ship too vanished; and finally that the area was officially declared a danger zone.

According to Larry Kusche's investigation, these "military vessels" were fishing vessels, and some of them were lost outside the Devil's Sea, even as far away as near Iwo Jima, 1000 km to the south. He also points out that, at that time, hundreds of fishing boats were lost around Japan every year.

The Japanese research vessel that Berlitz named, *Kaiyo Maru No 5*, had a crew of 31 aboard. While investigating activity of an undersea volcano, Myōjin-shō, about 300 km south of the Devil's Sea, it was destroyed by an eruption on 24 September 1952. Some wreckage was recovered.^[2] At least one ship sent an SOS. The other seven boats were small fishing boats lost between April 1949 and October 1953 somewhere between Miyake Island and Iwo Jima, a distance of 1,200 kilometres (750 mi).(Kusche: 258)

The Formosa Triangle contains most of the northeast Philippine Sea.
