

Interdimensionality, Spacecraft, and Injury

... it is true that witnesses approaching UFOs too closely have occasionally suffered burns and blackouts.

Near approaches of UFOs can be hazardous to human beings. Do not stand under a UFO that is hovering at low altitude. Do not touch or attempt to touch a UFO that has landed. In either case, the best thing to do is to get away from there very quickly and **LET THE MILITARY TAKE OVER** (my emphasis). There is a possibility of radiation danger and there are known cases where persons have been burned by rays emanating from UFOs. Don't take chances with UFOs!

Andrew [Collins] will appear at this year's TAG conference in August talking about the LightQuest concept – the idea that UFOs are interdimensional energy forms that use the medium of plasma, the fourth state of matter, to interact with this world.

A landmark case in the history of UFOs is the 1980 Cash-Landrum incident which occurred in the Piney Woods of Texas. This case marked the only time that any American citizen has sued the United States of America for damages received from a UFO....

Betty was forced to go to the hospital. She was admitted, and treated as a burn patient. She stayed for fifteen days. She lost her hair, and her eyes were so badly swollen that she was unable to see for a week. Seven-year old Colby had problems with his eyes also, and Vickie's hair began to fall out. The three witnesses to the large UFO were treated for radiation poisoning. Their condition was listed as life-threatening. Betty began to lose weight, and develop sores over her body. She was diagnosed as having skin cancer.
