

Off-Line Mail Readers

-  [1ST-200.ZIP](#) 1620K 07-20-1995
1stReader 2.00 QWK offline mail reader from Sparkware. This archive contains the rest of the basic 2.00 release. It includes manuals, address book, RIP and database support.
-  [1ST-200C.ZIP](#) 485K 07-20-1995
1stReader 2.00 QWK offline mail reader from Sparkware. This archive contains the spelling checker, 1STEDIT text editor and FLI support modules.
(File 3 of 6 in 2.00 release)
-  [1ST-200D.ZIP](#) 934K 07-20-1995
1stReader 2.00 QWK offline mail reader from Sparkware. This archive contains the multimedia sound files used by the full 1stReader 2.00 release. You do not need them if you do not have a sound card.
(File 4 of 6 in 2.00 release)
-  [1ST-200E.ZIP](#) 238K 07-20-1995
1stReader 2.00 QWK offline mail reader from Sparkware. This archive contains support for third party programmers who are interested in writing utilities for the 2.00 release. Includes full documentation on the 1stReader API interface.
(File 5 of 6 in 2.00 release)
-  [1ST-200F.ZIP](#) 368K 07-20-1995
1stReader 2.00 QWK offline mail reader from Sparkware. This archive contains the 80386 (and higher) compiled version of the 1ST.EXE program. Do NOT use if you own a 80286 or 8088 system.
(File 6 of 6 in 2.00 release)
-  [1ST-BBS.ZIP](#) 108K 07-20-1995
1stReader 2.00 sysop's kit. This archive tells you, the sysop, how to setup your own {QWKID}.BBS file so 1stReader can be "preconfigured" and ready to work seamlessly with your bulletin board system.
From Sparkware.
-  [1ST-UUE.ZIP](#) 31K 11-24-1994
1ST-UUE lets 1stReader quickly and

easily "reconstitute" UUENCODED binary files received via the Internet in messages. Free for registered users of 1stReader and Qmail DeLuxeý.

-  [1ST95PIF.ZIP](#) 1K 03-03-1996
PIF File to run First Reader under Windows
-  [1STSCAN.ZIP](#) 15K 07-29-1992
1stScan works with 1stReader to recreate missing .NDX files, scan for messages addressed to ALL (and write them to the ZIPPY conference) and locate messages addressed to other users and write them into your PERSONAL conference. Also lets you perform a ZIPPY keyword scan as soon the mail packet is unpacked. Easy to install and use! Free for 1stReader users!!!
-  [1STSCRNS.ZIP](#) 13K 09-18-1995
.SCREENS FOR 1STREADER OFFLINE MAIL READER.
This archive contains many ANSI pictures that can be used as backgrounds for picklists, or to replace the generic calling screen for any BBS. Also includes several colored message header screens. Unzip to a temporary directory and preview with the 1stReader File Manager. Updated 9/95
-  [1STSPELL.ZIP](#) 157K 05-15-1993
The 1stReader 1.10 spelling checker. This archive contains a spelling checker you can use with 1stReader to check your own replies. From Sparkware. Registration still only \$25 .00 for 1stReader. And now TOLL-FREE electronic ordering from The United States and Canada!!!!
-  [ACEW20.ZIP](#) 785K 12-16-1995
AceComm v2.0 Win31-Win95 Communications - Solid Easy to use Communications Terminal. Robust Ascii/X/Y/YG/Zmodem, Uploads manager Macros,key-redef,easy scripts with learn, Auto port and modem detect, Modem database ANSIBBS/VT100/RIPscrip, FAST terminal screen On line time recorder, Call logging/summary IEMSI/Auto login, Scripts/Learn, Macro Lang Split screen chat w/host option, BBS mode **EMSI Mailer/FReq/FAttach/QWK Mail Reader
-  [ADDQWK15.ZIP](#) 22K 07-01-1993
ADDQWK is a simple program to merge several QWK mail packets.

-  [AMAILE21.ZIP](#) 1004K 05-04-1997
Andamana Mail for Windows lets you read, write and manage your electronic mail from different Internet accounts or by using mail packets (SOUP and QWK format). Built-in mail archive and message filtering. MIME-64 and UUENCODE file attachments. Support for external encryption / decryption / signing of messages using PGP.EXE for DOS.
-  [ANNEX10F.ZIP](#) 56K 04-17-1993
Annex will interpret the message header information produced by OLX and manipulate it in just about any way that you like.
-  [ASO232.ZIP](#) 171K 10-25-1998
ASO - suomenkielinen OMEN- ja QWK-lukija, versio 2.32 (ent. Avis) PC:lle. SW.
-  [ATP08DOS.ZIP](#) 303K 01-23-1997
ATP is used for reading and replying to messages contained in QWK mail packets which are available through bulletin boards. This is the DOS version
-  [ATP08SRC.ZIP](#) 258K 01-23-1997
ATP is used for reading and replying to messages contained in QWK mail packets which are available through bulletin boards. This is the SOURCE code.
-  [BLUEQ170.ZIP](#) 43K 10-25-1996
BlueQWK v1.70 - Blue Wave {=} QWK converter. Enables QWK mailreaders to read and process messages created by the BlueWave mail door. Seamless support for 1stReader, RoboMail, OLX, Deluxe, SPEED READ, and others. Shareware by Geoffrey Sy.
-  [BOXIT14.ZIP](#) 20K 05-20-1992
Box-It basically takes the quoted file made by SLMR 2.0 and puts a box around the msg. As it does this, Box-It re-formats the text and wraps words so that the message will fit nicely in the box. Box-It will only work with SLMR 2.0, as it uses SLMR's configuration file.
-  [BW23_386.ZIP](#) 689K 02-12-1996
Blue Wave Offline Mail Reader/386 v2.30. A Blue Wave and QWK-compatible offline mail reader which offers the utmost ease of use and configurability. This is a 32-bit DOS text mode program which works on systems with an 80386 or higher processor only. Can use virtual memory to read the largest of mail packets. Release Date: 12 February 96
-  [BW23_DOS.ZIP](#) 473K 02-12-1996
Blue Wave Offline Mail Reader/DOS v2.30.

A Blue Wave and QWK-compatible offline mail reader which offers the utmost ease of use and configurability. This is a 16-bit DOS text mode program which works on systems ranging from XTs to the Intel Pentium and compatibles.
Release Date: 12 February 96

 [BW23_OS2.ZIP](#)

474K 02-12-1996

Blue Wave Offline Mail Reader/OS2 v2.30. A Blue Wave and QWK-compatible offline mail reader which offers the utmost ease of use and configurability. This is a 32-bit OS/2 text mode program for OS/2 2.0 or higher.
Release Date: 12 February 96

 [BWANSI.ZIP](#)

11K 05-20-1992

Lets you change colors in your Bluewave replies

 [BWDEV300.ZIP](#)

53K 11-30-1995

The Blue Wave Developer's Kit Version 3. All the information you need to create BW-compatible applications. Includes documentation and file structure header files (for ANSI/ISO C and Turbo Pascal).
Release Date: 30 November 1995

 [BWRFO60.ZIP](#)

35K 07-16-1999

BWREPFIX, version 0.60 Beta
A program to repair *.MSG reply packets that have been mangled by BlueWave Y2K bug.
Designed to run after Bluewave has formed the MSG packet, before it is compressed into the REP packet.
Can also be run on the BBS side, after decompression of REP packet.

 [BWS_13.ZIP](#)

23K 05-11-1994

BWSave Version 1.3
Utility to merge Blue Wave mail packets. Move messages from one Blue Wave mail packet to another. New features, bugs fixed, faster than version 1.2.

EZ-Reader 1.39 - The Ultimate Offline Mail Reader for QWK mail systems. This release corrects the problem with saving replies. Supports 2500 conferences and 400 messages per conference.
 ASP Member

 [EZQUOTE1.ZIP](#) 16K 04-04-1993

EZQuote is a small but powerful text editor specifically designed for use when replying to email messages offline. It functions as the external text editor invoked by your

offline reader, point software, or other message reader software.
It keeps the original message and your reply in separate sections. You select the text you want to quote, rather than having to delete what you don't want.

Message Trim Ver 1.1 from HOTware.
Utility to remove unwanted Tag
Lines, Quotes, Reader Signitures,
and Bridging Tags from the text of
messages. Message Trim is fully
configurable allowing configuration
of up to 100 "Search Items".
Optionally trims .ORIGIN lines to a
reasonable length, and removes
unwanted blank lines from messages.
Let's clean up our message areas to
make them a little more readable!
Ver 1.1 now can optionally keep
track of the "Last Processed
Message" for faster exectuion.
This version also adds over 30 new
items to the default search
criteria.

QWK (file format)

QWK is file-based offline mail reader format that was popular among bulletin board system (BBS) users, especially users of FidoNet and other networks that generated large volumes of mail. QWK was originally developed by Mark "Sparky" Herring in 1987 for systems running the popular PCBoard bulletin board system, but it was later adapted for other platforms. During the height of bulletin board system popularity, several dozen offline mail readers supported the QWK format.

Description

Like other offline readers, QWK was similar in operation to the Fidonet: messages for a particular user are gathered up by the BBS-side QWK software, compressed using an application such as PKZIP, and then transferred to the user. This is usually accomplished via a "BBS door" program running on the BBS system. In the case of QWK, the messages were placed in a single large file that was then bundled with several "control" files and then compressed into a single archive with the `.QWK` file extension (and typically the BBSes "id" name as the base filename). The file normally sent to the user automatically using the self-starting feature of the ZModem protocol, although most QWK doors allowed a selection of protocols to be used.

Once the resulting file has been received by the user, the steps are reversed to extract the files from the archive and then open them in a client-side "reader". Again, these individual steps are typically automated to a degree, meaning that the user simply has to invoke the door software on the BBS and then run the client, the intermediary steps being automated. QWK originally did not include any functionality for uploading replies, but this was quickly addressed as QWK became more popular. QWK placed replies in a `.REP` file (again, typically with the BBSes "id" as the name) that was exchanged automatically the next time the user called in.

QWK clients varied widely in functionality, but all of them offered basic e-mail and public forum support. Prior to the introduction of QWK and similar systems, it was not uncommon for users with large message volumes to set up their own FidoNet node to quickly gather their mail, but QWK dramatically reduced the required setup, and dramatically increased the number of users of offline mail.

QWK Format was used for years similarly to *Fido Technology Network* (FTN) for BBS networks, as a means of message forum syndication, by software including Synchronet, Wildcat Winserver and others.

Architecture

As QWK was originally designed to work with PCBoard, the system bears many marks of PCBoard's layout for message and forum files. For instance, QWK uses one file to contain the messages, and another that is used to index their headers. QWK was essentially a way to collect messages from PCBoard's internal files, and re-package them into a single file.

The hard-coding of much of QWK system to PCBoard formats led to a number of problems. In particular, the QWK system had a number of hard-coded limits to various fields, notably things like the subject line. This made it less than useful for non-PCBoard messages, and led to the creation of the SOUP format. SOUP was essentially a version of QWK supporting UseNet messages, extending the length of existing fields, as well as the adding several new fields to support UseNet features threading and routing. SOUP, however, was less widely used than the QWK format.

Probably the largest issue for implementing QWK is the `*.NDX` file which contains a record specifier in the old 4-byte Microsoft Binary Format float format. This format was used by early Microsoft BASIC compilers, but has been displaced by the IEEE 754 format. Further, since it is a four-byte value, and is used to represent an integer, a float is a poor choice where a 32-bit integer would have been much better. As a result of this, many pieces of software do or have incorrectly generated or used the `*.NDX` file, and others ignore it completely.
