וווה (taw) means mark, and its verb חוה (tawa), scribble, limit, is probably derived from the noun. HAW suggests that the more ancient form of this letter looked like an X, a shape which lends itself easily as a general mark. The word אוה (ta'awa) means boundary (that which is marked). The verb חוה (tawa) is used only once in the meaning of pain or wound (Psalm 78:41).

וַנ

The Archangel Thavael Sigil Card uses the Sigil of the Archangel Thavael to symbolise and channel the Archangel Thavael into your life and home. One of the lesser known Angels, The Archangel Thavael's role is to advise and guide us in our journey to a full, rich and happy life.

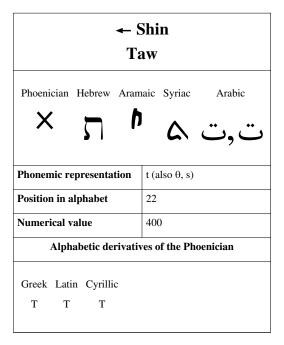

The Archangel Thavael Sigil Card is used to channel Thavaels angelic help and guidance; bringing peace and harmony into your home, enriching your life spiritually and emotionally and ridding you of any worries which make your life unhappy.

The gentle and loving nature of the Archangel Thavael make the Archangel Thavael Sigil Card perfect for use as part of the <u>Archangel Thavael Happiness Spell</u> which brings you peace, harmony and spiritual, emotional and material comfort in your life.

Taw

For other uses, see Taw (disambiguation).

Taw, **tav**, or **taf** is the twenty-second and last letter in many Semitic abjads, including Phoenician, Aramaic, Hebrew **taw** (Modern Hebrew: **tav**) Γ and Arabic alphabet $t\bar{a}$ \dot{a} (see below). Its original sound value is /t/.

The Phoenician letter gave rise to the Greek tau (T), Latin T, and Cyrillic T.

Origins of taw

Taw is said to have come from a *mark* or asterisk-like marking, perhaps indicating a signature. Its literal usage in the Torah denotes a **wound**, or in modern semantics, carving into a surface.

Hebrew tav

	Orthographic variants										
	Various Pri	Cursive	Rashi								
Serif	Sans-serif	Monospaced	Hebrew	Script							
ח	ת	л	ゝ	n							

Hebrew spelling: וְוֹי

Hebrew pronunciation

The letter tav in modern Hebrew usually represents a voiceless alveolar plosive /t/).

Variations on written form and pronunciation

The letter *tav* is one of the six letters which can receive a dagesh kal. The six are bet, gimel, dalet, kaph, pe, and tav (see Hebrew Alphabet for more about these letters). Three of them, bet, kaph, and pe, have their sound values changed in modern Hebrew from the fricative to the plosive by adding a dagesh. The other three have the same pronunciation in modern Hebrew, but have had alternate pronunciations at other times and places. In traditional Ashkenazi pronunciation, tav represented an /s/ (a form which is still heard today, especially among Diaspora Jews) without the dagesh, and had the plosive form when it had the dagesh. In some Sephardi areas, some Chassidic groups, as well as Yemen, tav without a dagesh represented a voiceless dental fricative /θ/ without a dagesh and the plosive form with the dagesh. In traditional Italian pronunciation tav without a dagesh is sometimes spelled as /s/ (for example in the word Tallit that is pronounced *talled*). See bet, dalet, kaph, pe, and gimel.

Significance of tav

In gematria tav represents the number 400, the largest single number that can be represented without using the *sophit* forms (see kaph, mem, nun, pe, and tzade).

In representing names from foreign languages, a *geresh* or *chupchik* can also be placed after the tav ($'\Pi$), making it represent $/\theta$ /.

In Judaism

Tav is the last letter of the Hebrew word *emet*, which means 'truth'. The midrash explains that *emet* is made up of the first, middle, and last letters of the Hebrew alphabet (aleph, mem, and tav: Sheqer (falsehood), on the other hand, is made up of the 19th, 20th, and 21st (and penultimate) letters.

Thus, truth is all-encompassing, while falsehood is narrow and deceiving. In Jewish mythology it was the word *emet* that was carved into the head of the golem which ultimately gave it life. But when the letter *aleph* was erased from the golem's forehead, what was left was "*met*"—dead. And so the golem died.

Ezekiel 9:4 depicts a vision in which the *tav* plays a Passover role similar to the blood on the lintel and doorposts of a Hebrew home in Egypt. ^[1] In Ezekiel's vision, the Lord has his angels separate the demographic wheat from the chaff by going through Jerusalem, the capital city of ancient Israel, and inscribing a mark, a tav, "upon the foreheads of the men that sigh and that cry for all the abominations that be done in the midst thereof."

In Ezekiel's vision, then, the Lord is counting tav-marked Israelites as worthwhile to spare, but counts the people worthy of annihilation who lack the tav and the critical attitude it signifies. In other words, looking askance at a culture marked by dire moral decline is a kind of shibboleth for loyalty and zeal for God.^[2]

Sayings with taf

"From aleph to taf" describes something from beginning to end, the Hebrew equivalent of the English "From A to Z."

Syriac taw

In the Syriac alphabet, as in the Hebrew and Phoenician alphabets, taw (\triangle) is the last letter in the alphabet. It represents either /t/ (voiceless alveolar plosive) or between a t and d sound.

g.	A	۵

Arabic tā'

The letter is named $t\bar{a}$ '. It is written in several ways depending on its position in the word:

Position in word:	Isolated	Final	Medial	Initial
Glyph form:				
	ت	ــت	ــتــ	تـ

Final عَـــ (fathah, then tā' with a sukun on it, pronounced /at/, though diacritics are normally omitted) is used to mark feminine gender for third-person perfective/past tense verbs, while final عَــ (tā'-fatḥah, /ta/) is used to mark past-tense second-person singular masculine verbs, final عَــ (tā'-kasrah, /ti/) to mark past-tense second-person singular feminine verbs, and final عَــ (tā'-dammah, /tu/) to mark past-tense first-person singular verbs. The plural form of Arabic letter عن is Altaaat (التاءات).

Recently the isolated $\bar{\ }$ has been used online because it resembles a smiling face. Wikipedia: Citation needed

Tā' marbūţah

An alternative form called $t\bar{a}$ 'marb $\bar{u}tah$ (Arabic: تاء مربوطة, meaning 'bound $t\bar{a}$ ') is used at the end of words to mark feminine gender for nouns and adjectives. It denotes the final sound /-a/ and, when in construct state, /-at/. Regular $t\bar{a}$ ', to distinguish it from $t\bar{a}$ ' marb $\bar{u}tah$, is referred to as $t\bar{a}$ ' maft $\bar{u}hah$ (Arabic: تاء مفتوحة, meaning 'open $t\bar{a}$ ').

Position in word:	Isolated	Final	Medial	Initial
Glyph form:				
	ة	ــة	ية_	ö

In words such as $ris\bar{a}lah$ $\mbox{\ }_{\mbox{\ }_{\mbox{\ }}}$ ('letter, message'), $t\bar{a}$ ' $marb\bar{u}tah$ is denoted as h, and pronounced as l-a/. Historically, it was pronounced as the l-t/ sound in all positions, but in coda positions it eventually developed into an weakly aspirated l-h/ sound (which is why l-ta' l-marbl-tah looks like a l-tah looks lo

When words containing the symbol are borrowed into other languages written in the Arabic alphabet (such as Persian), *tā' marbūṭah* usually becomes either a regular o or a regular.

The **Hebrew alphabet** (Hebrew: אֶלֶף־בֶּיֹת alefbet 'Ivri'), known variously by scholars as the **Jewish script**, **square script**, **block script**, is used in the writing of the Hebrew language, as well as other Jewish languages, most notably Yiddish, Ladino, and Judeo-Arabic. There have been two script forms in use; the original old Hebrew script is known as the paleo-Hebrew script (which has been largely preserved, in an altered form, in the Samaritan script), while the present "square" form of the Hebrew alphabet is a stylized form of the Assyrian script. Various "styles" (in current terms, "fonts") of representation of the letters exist. There is also a cursive Hebrew script, which has also varied over time and place.

History

Main article: History of the Hebrew alphabet

According to contemporary scholars, the original Hebrew script developed during the late second and first millennia BCE alongside othersWikipedia:Citation needed used in the region. It is closely related to the Phoenician script, which was also an abjad, and which itself probably gave rise to the use of alphabetic writing in Greece (Greek alphabet). A distinct Hebrew variant, called the paleo-Hebrew alphabet, emerged by the 10th century BCE, [4] an example of which is represented in the Gezer calendar.

The paleo-Hebrew alphabet was commonly used in the ancient Israelite kingdoms of Israel and Judah, as well as by the Samaritans. Following the exile of the Kingdom of Judah in the 6th century BCE, in the Babylonian exile, Jews began using a form of the Assyrian script, which was another offshoot of the same family of scripts. During the 3rd century BCE, Jews began to use a stylized, "square" form of the

A Jewish stele near the archeological excavations of the early medieval walls of Serdica

Aleppo Codex: 10th century CE Hebrew Bible with Masoretic pointing. Text of Joshua 1:1

Aramaic alphabet that was used by the Persian Empire (which in turn was adopted from the Assyrians), while the Samaritans continued to use a form of the paleo-Hebrew script, called the Samaritan script. After the fall of the Persian Empire, Jews used both scripts before settling on the Assyrian form. For a limited time thereafter, the use of the paleo-Hebrew script among Jews was retained only to write the Tetragrammaton, soon that but custom was also abandoned.Wikipedia:Citation needed

The square Hebrew alphabet was later adapted and used for writing languages of the Jewish diaspora – such as Karaim, Judæo-Arabic, Ladino, Yiddish, etc. The Hebrew alphabet continued in use for scholarly writing in Hebrew and came again into everyday use with the rebirth of the Hebrew language as a spoken language in the 18th and 19th centuries, especially in Israel.

Description

General

In the traditional form, the Hebrew alphabet is an abjad consisting only of consonants, written from right to left. It has 22 letters, five of which use different forms at the end of a word.

Vowels

In the traditional form, vowels are indicated by the weak consonants Aleph (8), He (7), Vav (1), or Yodh (*) serving as vowel letters, or matres lectionis: the letter is combined with a previous vowel and becomes silent, or by imitation of such cases in the spelling of other forms. Also, a system of vowel points to indicate vowels (diacritics), called niqqud, was developed. In modern forms of the alphabet, as in the case of Yiddish and to some extent modern Israeli Hebrew, vowels may be indicated. Today, the trend is toward full spelling with the weak letters acting as true vowels.

When used to write Yiddish, vowels are indicated, using certain letters, either with or without niqqud-diacritics (e.g., respectively: "יִ", "אָּ" or "יִר", except for Hebrew words, which in Yiddish are written in their Hebrew spelling.

Hebrew script on the bustier of Jan van Scorel's *Maria Magdalena*, 1530.

To preserve the proper vowel sounds, scholars developed several different sets of vocalization and diacritical symbols called *niqqud* (ניקוד), literally "applying points"). One of these, the Tiberian system, eventually prevailed. Aaron ben Moses ben Asher, and his family for several generations, are credited for refining and maintaining the

system. These points are normally used only for special purposes, such as Biblical books intended for study, in poetry or when teaching the language to children. The Tiberian system also includes a set of cantillation marks used to indicate how scriptural passages should be chanted, used in synagogue recitations of scripture (although these marks do not appear in the scrolls), called "trope". In everyday writing of modern Hebrew, *niqqud* are absent; however, patterns of how words are derived from Hebrew roots (called shorashim, or root letters) allow Hebrew speakers to determine the vowel-structure of a given word from its consonants based on the word's context and part of speech.

Alphabet

Neither the old Hebrew script nor the modern Hebrew script have case, but five letters have special final forms, ^[c] called **sofit** (Hebrew: סופית, meaning in this case "final" or "ending") form, used only at the end of a word, somewhat as in the Greek or in the Arabic and Mandaic alphabets. ^[b] These are shown below the normal form, in the following table (letter names are Unicode standard ^{[5][6]}). Hebrew is read and written from right to left.

Stylistic variants

Further information: Cursive Hebrew, Rashi script, Ashuri alphabet and History of the Hebrew alphabet

The following table displays typographic and chirographic variants of each letter. For the five letters that have a different final form used at the end of words, the final forms are displayed beneath the regular form.

The three lettering variants currently in use are block, cursive and Rashi. Block and Rashi are used in books. Block lettering dominates, with Rashi lettering typically used for certain editorial inserts (as in the glosses of Isserles to the Shulchan Aruch) or biblical commentaries (as in the commentary of Rashi) in various standard literary works. Cursive is used almost exclusively when handwriting, unless block lettering is desired for stylistic purposes (as in signage).

Yiddish symbols

Symbol	Explanation
רר רי	These are intended for Yiddish. They are not used in Hebrew ^[d] .
רר רר	
٦	The <i>rafe</i> (127) diacritic is no longer regularly used in Hebrew. In masoretic manuscripts and some other older texts the soft fricative consonants and sometimes <i>matres lectionis</i> are indicated by a small line on top of the letter. Its use has been largely discontinued in modern printed texts. It is still used to mark fricative consonants in the YIVO orthography of Yiddish.

Numeric values of letters

Main article: Hebrew numerals

Hebrew letters are used to denote numbers, nowadays used only in specific contexts, e.g. denoting dates in the Hebrew calendar, denoting grades of school in Israel, other listings (e.g. 'מֵלב ב', 'שֵּלב ', 'שֶּלב ', 'phase a, phase b"), commonly in Kabbalah (Jewish mysticism) in a practice known as gematria, and often in religious contexts.

letter	numeric value	letter	numeric value	letter	numeric value
8	1	,	10	ק	100
ב	2	П	20	٦	200
ړ	3	5	30	ט	300
٦	4	מ	40	П	400
п	5	j	50	٦	500
١	6	D	60		600
7	7	מ	70	1	700
П	8	ภ	80	٦	800
מ	9	и	90	r	900

The numbers 500, 600, 700, 800 and 900 are commonly represented by the juxtapositions ק"ח, ח"ח, and ק"ח, ה"ח, מש"ח, respectively. Adding a geresh ("'") to a letter multiplies its value by one thousand, for example, the year 5769 is portrayed as מ"ח, where ה represents 5000, and מ"ח represents 769.

Transliterations and transcriptions

Main articles: Romanization of Hebrew, Biblical Hebrew, Yiddish language and Yiddish orthography
The following table lists transliterations and transcriptions of Hebrew letters used in Modern Hebrew.

Clarifications:

- For some letters, the Academy of the Hebrew Language offers a *precise* transliteration that differs from the *regular* standard it has set. When omitted, no such precise alternative exists and the regular standard applies.
- The IPA phonemic transcription is specified whenever it uses a different symbol from the one used for the **regular** standard Israeli transliteration.
- The IPA phonetic transcription is specified whenever it differs from IPA phonemic transcription.

Note: SBL's transliteration system, recommended in its Handbook of Style, [9] differs slightly from the 2006 precise transliteration system of the Academy of the Hebrew Language; for "3" SBL uses "\$" (\neq AHL "z"), and for \neg " \neg " \neg " with no dagesh, SBL uses the same symbols as for with dagesh (i.e. "b", "g", "d", "k", "f", "t").

Notes

Al^2^3^4^ In transliterations of modern Israeli Hebrew, initial and final \$\mathbb{D}\$ (in regular transliteration), silent or initial \$\mathbb{N}\$, and silent \$\pi\$ are *not* transliterated. To the eye of readers orientating themselves on Latin (or similar) alphabets, these letters might seem to be transliterated as vowel letters; however, these are in fact transliterations of the vowel diacritics — niqqud (or are representations of the spoken vowels). E.g., in \$\mathbb{D}\mathbb{N}\$ ("if", [?im]), \$\mathbb{D}\mathbb{N}\$ ("mother", [?em]) and \$\mathbb{D}\mathbb{N}\$ ("nut", [?om]), the letter \$\mathbb{N}\$ always represents the same consonant: [?] (glottal stop), whereas the vowels \$\langle ii \eta\$, \$\langle e \text{and } \langle o \text{ respectively represent the spoken vowel, whether it is orthographically denoted by diacritics or not. Since the Academy of the Hebrew Language ascertains that \$\mathbb{N}\$ in initial position is not transliterated, the symbol for the glottal stop \$\hat{i}\$ is omitted from the transliteration, and only the subsequent vowels are transliterated (whether or not their corresponding vowel diacritics appeared in the text being transliterated), resulting in "im", "em" and "om", respectively.

B1^ 2^ 3^ The diacritic geresh – "'" – is used with some other letters as well ('ח,'ח,'ש, 'ש', 'ח,'ח), but only to transliterate *from* other languages *to* Hebrew – never to spell Hebrew words; therefore they were not included in this table (correctly translating a Hebrew text with these letters would require using the spelling in the language from which the transliteration to Hebrew was originally made). The non-standard "'ו" and "וו" [e1] are sometimes used to represent /w/, which like $\sqrt{3}$, /3/ and /t]/ appears in Hebrew slang and loanwords.

C1^ 2^ The Sound / χ / (as "ch" in loch) is often transcribed "ch", inconsistently with the guidelines specified by the Academy of the Hebrew Language: $\Box \Box /\chi am/ \rightarrow "cham"$; $\Box \Box /s\chi a\chi/ \rightarrow "schach"$.

D^ Although the Bible does include a single occurrence of a final pe with a dagesh (Book of Proverbs 30, 6: אָל-תּוֹםְרָיו: פֶּּן-יוֹבִיחַ בְּדָ וְנִבְּזְבְּרִיוֹ: פֶּּן-יוֹבִיחַ בְּדָ וְנִבְּזְבְּתִי:), in modern Hebrew /p/ is always represented by pe in its regular, not final, form "פּ", even when in final word position, which occurs with loanwords (e.g. שׁלִּי /ʃop/ "shop"), foreign names (e.g. שִׁלִּי /ˈfilip/ "Philip") and some slang (e.g. שְׁלִי /ˈgaˈrap/ "slept deeply").

Pronunciation

Main article: International Phonetic Alphabet for Hebrew

The descriptions that follow are based on the pronunciation of modern standard Israeli Hebrew.

Lette	ers	8	ה	ב	ړ	ړ	ړ′	٦	Τ.	٦'	п	٦	٦	Ì	וו, ו'	7	1	П	В	7
															(non-standard) ^[e2]

Lette	ers	•	Ľ.	ר ד	5	ם	נן	O	ם	U	ป	צץ	צ' ץ'	P	٦	تا	ß	ű	IJ	ď
IP.	A	[i]	[k]	[χ]	[1]	[m]	[n]	[s]	[ʔ]~[ʕ], Ø	[p]	[f]	[ts]	[tʃ]	[k]	[R]~[r]	[ʃ]	[s]	[t]		[θ]

Shin and sin

Further information: Shin (letter)

Shin and sin are represented by the same letter, \mathcal{D} , but are two separate phonemes. They are not mutually allophonic. When vowel diacritics are used, the two phonemes are differentiated with a shin-dot or sin-dot; the shin-dot is above the upper-right side of the letter, and the sin-dot is above the upper-left side of the letter.

Symbol	Name	Transliteration	IPA	Example
(right dot)	shin	sh	/ʃ/	shop
U (left dot)	sin	s	/s/	sour

Historically, *left-dot-sin* corresponds to Proto-Semitic *ś, which in biblical-Judaic-Hebrew corresponded to a voiceless alveolar lateral fricative /ɬ/, as is evident in Greek transliteration of Hebrew words such as *Balsam* (☐Ѿ) (the *ls* - 'Ѿ') as is evident in the Targum Onkelos.Wikipedia:Citation needed Rendering of proto-semitic *ś as /ɬ/, is still evident in the Soqotri language.Wikipedia:Citation needed

Dagesh

Main article: Dagesh

Historically, the consonants $\[\exists \ beth, \] \ gimel, \] \ daleth, \] \ kaf, \] \ pe$ and $\[\Box \ tav \]$ each had two sounds: one hard (plosive), and one soft (fricative), depending on the position of the letter and other factors. When vowel diacritics are used, the hard sounds are indicated by a central dot called $\[dagesh \] \[(\[\Box \] \] \]$, while the soft sounds lack a $\[dagesh \]$. In modern Hebrew, however, the $\[dagesh \]$ only changes the pronunciation of $\[\Box \] \[beth, \] \[kaf, \]$ and $\[\Box \] \[pe, \]$ and doesn't affect the name of the letter. The differences are as follows:

Name		With dagesh	1		Without dagesh					
	Symbol Transliteration		IPA Example		Symbol	Transliteration	IPA	Example		
beth	コ	b	/b/	b un	٦	v	/v/	van		
kaf	בר ב	k	/k/	kangaroo	ר ך	kh/ch/x	/χ/	loch		
pe	Ð	p	/p/	pass	ק פ	f/ph	/f/	find		

In other dialects (mainly liturgical) there are variations from this pattern.

- In some Sephardi and Mizrahi dialects, bet without dagesh is pronounced [b], like bet with dagesh
- In Syrian and Yemenite Hebrew, *gimel* without dagesh is pronounced [γ].

• In Yemenite Hebrew, and in the Iraqi pronunciation of the word "Adonai", *dalet* without dagesh is pronounced [ð] as in "these"

- In Ashkenazi Hebrew, tav without dagesh is pronounced [s] as in "silk"
- In Iraqi and Yemenite Hebrew, and formerly in some other dialects, tav without dagesh is pronounced [θ] is in "thick"

Identical pronunciation

In Israel's general population, many consonants have the same pronunciation. They are as follows:

Letters				Transliteration	Pronunciation (IPA)			
X Alef*	Ŭ Ayin*			not transliterated	Usually when in medial word position: /./ (separation of vowels in a hiatus)			
					When in initial or final word position, sometimes also in medial word position: silent			
					alternatingly			
				'or'	/?/ (glottal stop)			
		٦		v	/v/			
Bet (without dagesh)	Vav							
<u>п</u>				kh/ch/h	/χ/			
Het	Kaf (without dagesh)		t	N				
∑ Tet	Tav							
Kaf (with dagesh)	\sum_{Qof}		k	/k/				
D	Ü		S	/s/				
Samekh	Sin (with left dot)							
R	תם	and	תש	ts/tz	/ts/			
Tsadi*	Tav-Samekh*		Tav-Sin*	16161	16			
_ 、ヱ	מש	and	תש	ch/tsh (chair)	/t ʃ /			
Tsadi (with geresh)	Tet-Shin*		Tav-Shin*					

^{*} Varyingly

Ancient Hebrew pronunciation

Some of the variations in sound mentioned above are due to a systematic feature of Ancient Hebrew. The six consonants /b g d k p t/ were pronounced differently depending on their position. These letters were also called $BeGeD\ KeFeT$ letters / beIg&d'k&f&t/. The full details are very complex; this summary omits some points. They were pronounced as plosives /b g d k p t/ at the beginning of a syllable, or when doubled. They were pronounced as fricatives /v γ ð x f θ / when preceded by a vowel (commonly indicated with a macron, b g d k p t). The plosive and double pronunciations were indicated by the dagesh. In Modern Hebrew the sounds d and g have reverted to [d] and

[g], respectively, and \underline{t} has become [t], so only the remaining three consonants /b k p/ show variation. \neg resh may have also been a "doubled" letter, making the list BeGeD KePoReS. (Sefer Yetzirah, 4:1)

- \sqcap *chet* and \square *ayin* represented pharyngeal fricatives, \square *tsadi* represented the emphatic consonant /s⁵/, \square *tet* represented the emphatic consonant /t⁵/, and \nearrow *qof* represented the uvular plosive /q/. All these are common Semitic consonants.
- \Dotsin (the /s/ variant of \Dotsin was originally different from both \Dotsin shin and \Dotsin samekh, but had become /s/ the same as \Dotsin samekh by the time the vowel pointing was devised. Because of cognates with other Semitic languages, this phoneme is known to have originally been a lateral consonant, most likely the voiceless alveolar lateral fricative /4/ (the sound of modern Welsh \Dotsin) or the voiceless alveolar lateral affricate /t4/ (like Náhuatl \Dotsin).

Vowels

Matres lectionis

Main article: Mater lectionis

 \aleph alef, \sqcap he, \urcorner vav and \urcorner yod are letters that can sometimes indicate a vowel instead of a consonant (which would be, respectively, /?/, /h/, /v/ and /j/). When they do, \urcorner and \urcorner are considered to constitute part of the vowel designation in combination with a niqqud symbol – a vowel diacritic (whether or not the diacritic is marked), whereas \aleph and \sqcap are considered to be mute, their role being purely indicative of the non-marked vowel.

Letter	Name of letter	Consonant indicated when letter consonantal	Vowel designation	Name of vowel designation	Indicated Vowel
8	alef	/?/	_	_	ê, ệ, ậ, â, ô
п	he	/h/	_	_	ê, ệ, ậ, â, ô
٦	vav	/v/	ì	ḥolám malé	ô
			٦.	shurúq	û
7	yud	/j/	٠.	ḥiríq malé	î
			٠	tseré malé	ê, ệ

Vowel points

Niqqud is the system of dots that help determine vowels and consonants. In Hebrew, all forms of *niqqud* are often omitted in writing, except for children's books, prayer books, poetry, foreign words, and words which would be ambiguous to pronounce. Israeli Hebrew has five vowel phonemes, /i e a o u/, but many more written symbols for them:

Name	Symbol	Israeli Hebrew				
		IPA	Transliteration	English example		
Hiriq	Ò	[i]	i	mandi		
Zeire	Ö	[e], ([ej] with succeeding yod)	e, (ei with succeeding yod)	men, main		
Segol	Ô	[ę]	e	men		
Patach	Ō	[ä]	a	father		
Kamatz	D O	[ä], (or [o])	a, (or o)	father		
Holam Haser	Ö	[ð]	O	over		
Holam Male	٦	[6]	0	over		
Shuruk	·I	[u]	u	m oo n		
Kubutz	Ő	[u]	u	moon		

Note 1: The symbol "D" represents whatever Hebrew letter is used.

Note 2: The pronunciation of *zeire* and sometimes segol — with or without the letter yod — is sometimes ei in Modern Hebrew. This is not correct in the normative pronunciation and not consistent in the spoken language.

 $\textbf{Note 3:} \ \textbf{The } \textit{dagesh}, \textit{mappiq}, \text{ and } \textit{shuruk} \text{ have different functions, even though they look the same.}$

Note 4: The letter (vav) is used since it can only be represented by that letter.

Meteg

Main article: Meteg

By adding a vertical line (called *Meteg*) underneath the letter and to the left of the vowel point, the vowel is made long. The *meteg* is only used in Biblical Hebrew, not Modern Hebrew.

Sh'va

Main article: Sh'va

By adding two vertical dots (called Sh'va) underneath the letter, the vowel is made very short.

Name	Symbol	Israeli Hebrew				
		IPA	Transliteration	English example		
Shva	Q	[e] or ∅	apostrophe, e, or nothing	h as pronounced in h erb		
Reduced Segol	Q	[ę]	e	men		
Reduced Patach	Ō	[ä]	a	father		
Reduced Kamatz	ב ק	[ð]	O	father		

Comparison table

	Vowel comparison table ^[12]							
(phonetica	Vowel Length ally not manifested in	IPA	Transliteration	English example				
Long	Short	Very Short	-					
т	-	-:	[ä]	a	spa			
		**	[ę]	e	temp			
Ì	τ Wikipedia:Disputed statement	T: Wikipedia:Disputed statement	[ð]	O	Congo			
٦.		n/a	[u]	u	soon			
٦.			[i]	i	ski			
	Note I:	By adding two vertical dots (sh'va) : the vowel is made very short.						
]	Note II:	The short o and long a have the same $niqqud$.						
1	Note III:	The short o is usually promoted to a long o in Israeli writing for the sake of disambiguation						
1	Note IV:	The short u is usually promoted to a long u in Israeli writing for the sake of disambiguation						

Gershayim

Main article: Gershayim

The symbol " is called a gershayim and is a punctuation mark used in the Hebrew language to denote acronyms. It is written before the last letter in the acronym. Gershayim is also the name of a note of cantillation in the reading of the Torah, printed above the accented letter.

Sounds represented with diacritic geresh

Main articles: Geresh and Hebraization of English

The sounds [t], [d3], [3], written "'\(\frac{2}{3}\)", "'\(\frac{1}{3}\)", and [w], non-standardly sometimes transliterated \(\frac{1}{3}\) or '\(\frac{1}{6}\)^{[e3]}, are often found in slang and loanwords that are part of the everyday Hebrew colloquial vocabulary. The apostrophe-looking symbol after the Hebrew letter modifies the pronunciation of the letter and is called a *geresh*. (As mentioned above, while still done, using '\(\frac{1}{3}\) to represent [w] is non-standard; standard spelling rules allow no usage of '\(\frac{1}{3}\) whatsoever $[e^4]$).

Hebrew slang and loanwords							
Name	Symbol IPA Transliteration			Exa	Example		
Gimel with a geresh	۲' ک	[d͡ʒ]	ğ	ğ áḥnun	[ˈd͡ʒaҳnun]	גֵּ׳ חְנוּן	
Zayin with a geresh	17	[3]	ž	kolá ž	[koˈlaʒ]	קוֹלַמּז׳	
Tsadi with a geresh	צ׳	[t]]	č	čupár (treat)	[t]u'par]	א, וּפָּר	
Vav with a geresh or double Vav	or (non standard) ^[e5]	[w]	W	awánta (boastful act)	[aˈwanta]	אַוּנְמַה	

The pronunciation of the following letters can also be modified with the geresh diacritic, the represented sounds are however foreign to Hebrew phonology, i.e., these symbols only represent sounds in foreign words or names when transliterated with the Hebrew alphabet, and never loanwords.

	Transliteration of non-native sounds							
Name	Symbol	IPA	Arabic letter	Exa	nmple	Comment		
Dalet with a geresh	7	[ð]	Dhāl (s) Voiced th	Dhū al-Ḥijjah (ذو الحجة)	ד'ו אל-חיג'ה	* Also used for English voiced th * Often a simple ¬ is written.		
Tav with a geresh	ſŊ	[θ]	Thā'(ث) Voiceless th	Thurston	ת'רסמון			
Het with a geresh	ĺΠ	[χ]	Khā'(¿)	Shei kh (شیخ)	שייח׳	* Unlike the other sounds in this table, the sound $[\chi]$ represented by $'\Pi$ is indeed a native sound in Hebrew; the geresh is however used only when transliteration must distinguish between $[\chi]$ and $[\hbar]$, in which case $'\Pi$ transliterates the former and Π the latter, whereas in everyday usage Π without geresh is pronounced $[\hbar]$ only dialectically but $[\chi]$ commonly.		
Resh with a geresh	or 'y	[R]	Ghayn (¿)	Gh ajar (غجر)	ר'ג'ר	Sometimes an 'ayin with a geresh ($'\mathfrak{U}$) is used to transliterate $\dot{\varepsilon}$ – inconsistently with the guidelines specified by the Academy of the Hebrew Language		

A *geresh* is also used to denote acronyms pronounced as a string of letters, and to denote a Hebrew numeral. Geresh also is the name of one of the notes of cantillation in the reading of the Torah, but its appearance and function is different.

Religious use

The letters of the Hebrew alphabet have played varied roles in Jewish religious literature over the centuries, primarily in mystical texts. Some sources in classical rabbinical literature seem to acknowledge the historical provenance of the currently used Hebrew alphabet and deal with them as a mundane subject (the Jerusalem Talmud, for example, records that "the Israelites took for themselves square calligraphy", and that the letters "came with the Israelites from Ashur [Assyria]"); others attribute mystical significance to the letters, connecting them with the process of creation or the redemption. In mystical conceptions, the alphabet is considered eternal, pre-existent to the Earth, and the letters themselves are seen as having holiness and power, sometimes to such an extent that several stories from the Talmud illustrate the idea that they cannot be destroyed. [14]

The idea of the letters' creative power finds its greatest vehicle in the Sefer Yezirah, or *Book of Creation*, a mystical text of uncertain origin which describes a story of creation highly divergent from that in the Book of Genesis, largely

through exposition on the powers of the letters of the alphabet. The supposed creative powers of the letters are also referenced in the Talmud and Zohar. ^{[15][16]}

Another book, the 13th-century Kabbalistic text Sefer HaTemunah, holds that a single letter of unknown pronunciation, held by some to be the four-pronged shin on one side of the teffilin box, is missing from the current alphabet. The world's flaws, the book teaches, are related to the absence of this letter, the eventual revelation of which will repair the universe. [17] Another example of messianic significance attached to the letters is the teaching of Rabbi Eliezer that the five letters of the alphabet with final forms hold the "secret of redemption".

In addition, the letters occasionally feature in aggadic portions of non-mystical rabbinic literature. In such aggada the letters are

often given anthropomorphic qualities and depicted as speaking to God. Commonly their shapes are used in parables to illustrate points of ethics or theology. An example from the Babylonian Talmud (a parable intended to discourage speculation about the universe before creation):

Why does the story of creation begin with bet?... In the same manner that the letter bet is closed on all sides and only open in front, similarly you are not permitted to inquire into what is before or what was behind, but only from the actual time of Creation.

Babylonian Talmud, Tractate Hagigah, 77c

Extensive instructions about the proper methods of forming the letters are found in Mishnat Soferim, within Mishna Berura of Yisrael Meir Kagan.

Mathematical use

In set theory letter aleph is used to mark infinite cardinality of a set, for example "number" of all natural numbers is \aleph_0 . Similarly beth is used for infinite ordinals. See aleph number and beth number.

Unicode and HTML

Main article: Unicode and HTML for the Hebrew alphabet

The Unicode Hebrew block extends from U+0590 to U+05FF and from U+FB1D to U+FB4F. It includes letters, ligatures, combining diacritical marks (*niqqud* and cantillation marks) and punctuation. The Numeric Character References is included for HTML. These can be used in many markup languages, and they are often used in Wiki to create the Hebrew glyphs compatible with the majority of web browsers.

Notes

- ^{a^} "Alef-bet" is commonly written in Israeli Hebrew without the *maqaf* (מקף, "[Hebrew] hyphen"), אלפבית עברי, as opposed to with the hyphen, אלף־בית עברי.
- b[^] The Arabic letters generally (as six of the primary letters can have only two variants) have four forms, according to their place in the word. The same goes with the Mandaic ones, except for three of the 22 letters, which have only one form.
- ר"ב (final) positions, both pronunciations are possible. In Modern Hebrew this restriction is not absolute, e.g. (fizi'kaj/ and never /pizi'kaj/ (= "physicist"), קוֹם (snob/ and never /snov/ (= "snob"). A *dagesh* may be inserted to unambiguously denote the plosive variant: $\Box = /b/$, $\Box = /k/$, $\Box = /p/$; similarly (though today very rare in Hebrew and

common only in Yiddish) a rafé placed above the letter unambiguously denotes the fricative variant: $\tilde{\beth} = /v/$, $\tilde{\beth} = /\chi/$ and $\tilde{\beth} = /f/$. In Modern Hebrew orthography, the sound [p] at the end of a word is denoted by the regular form " \beth ", as opposed to the final form " \beth ", which always denotes [f] (see table of transliterations and transcriptions, comment [D]). d^ However, \beth (two separate vavs), used in Ktiv male, is to be distinguished from the *Yiddish ligature* \beth (also two vavs but together as one character).

e1^ e2^ e3^ e4^ e5^ The Academy of the Hebrew Language states that both [v] and [w] be indistinguishably represented in Hebrew using the letter Vav. [18] Sometimes the Vav is indeed doubled, however not to denote [w] as opposed to [v] but rather, when spelling without niqqud, to denote the phoneme /v/ at a non-initial and non-final position in the word, whereas a single Vav at a non-initial and non-final position in the word in spelling without niqqud denotes one of the phonemes /u/ or /o/. To pronounce foreign words and loanwords containing the sound [w], Hebrew readers must therefore rely on former knowledge and context.
