

# What is a UFO and Where are They From?

---

A man name Robert Terama. Has discover that ufo's are from the bottom of the ocean. They come up from the bottom the the ocean and live underneath the sea. So deep humans could not resist the pressure to go so beneath. There is a cave in the SOUTH POLE that is made of an ice circle perfectly 360 d.g which has water inside and is about 300 ft by 175 wide. It has been said that the cave has a glowing green light effect around 2am night's and 4am sometimes. It was told that a boat ship had saw about 60 - 70 craft's had slowly flew out of this cave. And everyone on board had fallen asleep for more than 8 hours at the same time. It was told most of the men on board had not remember a thing.

Other people who had driven smaller boats had told terama that the water was once boiling with bubbles and could feel heat from a distance of 5 miles. They had also told him that that very day a ufo was underneath their boat flashing orange and green lights. And that they had felt a noise in their ear radiating a sound so loud it made them want to puke.

Robert Terama has physical proof of a micro device made of non earth metal and laser's. He refuses to give it to officials of the public and is doing his personal study on

it. He think's it's a heating device to burn ice. It's still under investigation.
