A New Framework for Global Prosperity

Baha'i International Community's submission to the 2006 Commission on Social Development on the review of the First United Nations Decade for the Eradication of Poverty

January 2006

1. Any definition of poverty and course for its elimination is shaped by prevailing notions about the nature and purpose of the development process. The combined efforts of the United Nations and civil society have significantly expanded the understanding of poverty and development. The recognition of the interrelatedness of development, human rights, and human security; the increased awareness of the interactions between the market and the legal, social, cultural and physical environment in which it operates [1] ; the acknowledgement of human well-being as the goal of development; efforts to introduce more equity into systems of global trade and finance; and the emphasis on human solidarity as the basis for sustainable development -- these have generated a worldwide momentum in the drive to find enduring solutions to the scourge of poverty.

2. Despite these advances, however, the underlying materialistic assumptions driving poverty eradication efforts remain virtually unchallenged: it is generally accepted that an increase in material resources will eradicate this condition from human life. The Millennium Development Goals, while effective in catalyzing poverty alleviation efforts, have also framed development primarily in terms of the improvement of material conditions. [2] Yet the most persistent ills obstructing the peaceful development of peoples and nations -- the marginalization of girls and women, failing states, the lack of political freedoms, the spread of HIV/AIDS, the proliferation of weapons and violent conflict, inter-ethnic and racial tensions, religious intolerance and extremism, lawlessness and growing unemployment -- cannot be alleviated by material means alone. These social ills evidence a different kind of poverty -- one rooted in the values and attitudes that shape relationships between individuals, communities, and nations as well as between the governors and the governed.

3. The Baha'i International Community views the purpose of development as contributing to the foundation for a new social and international order, capable of creating and sustaining conditions in which human beings can advance morally, culturally, and intellectually [3]. This purpose is rooted in the understanding that the transformation of society will involve profound changes in the individual as well as the deliberate and systematic re-creation of social structures. From this perspective, *poverty can be defined as the absence of resources -- physical, social, and ethical -- necessary for the establishment of conditions, which promote the moral, material, and creative capacities of individuals, communities, and institutions*. Guided by this definition and the belief in the inherent goodness and essential spiritual nature of every human being, we submit the following recommendations to the United Nations on the occasion of its review of the United

Nations Decade for the Eradication of Poverty.

4. **Overcome the limitations of particularistic mindsets** The eradication of poverty will require a fundamental paradigm shift on the part of nations and individuals. Our particularistic frames of reference -- defined by ethnic or religious community, nation, 'North' and 'South,' 'developed' and 'developing,' or regional alliances -- must gradually give way to an emerging sense of global solidarity and responsibility. Facilitated by efforts to integrate human rights into development and security frameworks, initiatives to create more just systems of trade and finance, evolving concepts of sovereignty, a growing body of international law, and a dramatic increase in travel and communication technology, such a shift is already well underway. We must now strive to enlarge our notions of responsibility and citizenship until we come to understand the struggles and progress of other peoples and nations as our own. Such a paradigm shift represents a practical response to the recognition that peace and prosperity are indivisible and that no sustainable benefit can be conferred on a nation or community if the welfare of the nations as a whole is ignored or neglected.

5. **Enhance local deliberative and problem-solving capacity** Often the target populations of poverty eradication projects are perceived as masses of undernourished people, overwhelmed by their circumstances and needs rather than capable agents of change in their communities. The challenge for development efforts is to find methods that allow individuals and communities to solve their own problems; the ability of a community to take on more complex social issues is a key indicator of progress. One of the essential skills involved is that of group decision-making -- bringing together diverse views, searching for the best solution, and generating commitment and solidarity to carry the decision through.

6. **Implement gender-based budgeting** Many studies confirm that female poverty cannot be conceptualized the same way as male poverty, given that women's social and cultural roles and their relationship to systems of power and authority differ from those of men. [4] These differences, however, are rarely reflected in official poverty statistics and, consequently, do not inform resource allocation at local, national, and regional levels. [5] In order for governments to fulfill their commitments to gender equality, public expenditures must include a gender analysis -- involving women in budget decision-making and assessing the impact of fiscal measures on the status of women in the community.

7. As women hold approximately 15% of elected parliamentary seats globally, the power to legislate and effect change at the national and global levels rests primarily with men. It is equally their responsibility to push for the unconditional ratification of the Convention for the Elimination of All Forms of Discrimination Against Women by member states and to put in place accountability mechanisms when commitments are not followed through. The extension of opportunities to women and the emergence of new forms of partnership between men and women have the potential to revolutionize every institution of society from the family to the government -- creating the very conditions that make progress and prosperity possible.

8. **Create rural centers of technology training and research** While the adoption of new technologies is integral to development, too often -- under the guise of 'modernization'-- these have been inappropriate to the culture and community into which they were introduced. Alongside Millennium Development Goals calling for the sharing of information and communication technologies, equally important is the creation of local institutions, such as rural centers of technology training and research, constructively blending modern scientific methods with indigenous practices and thereby directly engaging local populations in the generation and

implementation of new ideas. True development consists of the creation of indigenous capacity to participate in the generation of technologies for the benefit of the broader community.

9. **Expand development indicators to assess ethical and moral capacities** The measures and indicators used to assess poverty and human development, such as the Gross National Product and the Human Development Index, largely determine what is valued and, as such, shape development policy and priorities. The progress of communities and nations requires not only material inputs and legal measures to secure order, but the development of moral capabilities to govern behavior and decision-making by individuals and institutions.

10. In an effort to advance the methods for assessing development at the community level from a moral perspective, the Baha'i International Community has proposed the following set of principles as a basis for the construction of ethically-based development indicators: unity in diversity (the extent to which all members of a community are integrated into community life); equity and justice (to ensure that opportunity and access to material and social resources are fairly distributed); gender equality; trustworthiness; and freedom of thought, conscience and belief. [6] These principles could be applied in the areas of economic development, education, environmental stewardship, and governance, for example, to generate development goals and construct new indicators to measure progress towards these goals.

11. **Eliminate extremes of wealth** Extremes of poverty are linked to extremes of wealth. Given the interconnectedness of the global economic system, one extreme cannot be abolished while the other is allowed to exist. In this regard, efforts to eradicate poverty must include an earnest re-evaluation of global systems and processes -- including governance, trade, and the private transactions -- that perpetuate the growing extremes of wealth and poverty. Greater corporate accountability should not be restricted to the environment and labor standards but also take into account the full panoply of human rights. The legitimacy and social benefit of one's material resources depend on the means by which they are acquired and the end to which they are used.

12. While the Millennium Development Goals have focused the world's development agenda for the next ten years, the United Nations must not limit its attention to this relatively short span of time -- which confines it to a primarily reactive mode. Alongside short-term goals, the United Nations, with academia and civil society, needs to consider longer-term scenarios and desired outcomes. Such an orientation would allow it to examine a wider range of policy and programmatic options and to cultivate a diversity of intellectual contributions, thereby enriching the visioning process. Let us not be content with minimum standards, narrow material goals, and compromise positions but rather cast a vision of prosperity that can inspire the masses of humanity to work towards its realization in a deliberate act of global solidarity.
